Tecalemit Fuel Management Systems

HDAC & HDACK

Fluid Transfer Solutions

HDAC

HDACK

Product Details:

The Tecalemit HDAC and HDACK fuel management systems provide complete solutions to your customer's fuel management needs. The HDAC is a fuel management system with terminal, Cloud software, and USB download stick, whilst the HDACK is a complete kit which also includes a GSM modem, SIM card for automatic downloads of transactions, 10 vehicle/driver tags, and a tank-level probe (accurate to +/-0.5%). The HDAC and HDACK provide complete control and visibility over fuel management, offering features such as automated reports, vehicle-allocated tags allowing for transparent transactions, and a Cloud system that offers access to the system 24/7.

Hytek supply the units already configured for the customer (upon receipt of a completed questionnaire), offering a complete plug & play solution. As the only UK-approved Service and Technical Centre, we offer unrivalled support and training, providing pre-sales demos and support, and ongoing aftercare support via our fully trained teams.

Key Features:

- Suitable with diesel, HVO, biodiesel, and AdBlue®
- Controls a single pump with a 110V - 230V power supply
- Supports up to 4,000 users and stores up to 10,000 transactions
